

anf policy

australian nursing federation

health and the environment

Where the term 'nurse' is used it includes all licensed classifications including, but not limited to: registered nurse, midwife, enrolled nurse, nurse practitioner.

It is the policy of the Australian Nursing Federation that:

1. Individual and population wellbeing is inextricably linked with the health of the environment. A healthy environment not only leads to improved health for the population but it also encourages people to make choices for better health (WHO Director General 2000).
2. Public policy underpins the promotion and maintenance of health at both the individual and the population level.
3. The Australian Nursing Federation supports:
 - 3.1 the development of a health service sector which focuses on health improvement and involves communities in decision making;
 - 3.2 lobbying for environmental impact assessment criteria to be considered in accreditation processes and assessment of research applications;
 - 3.3 lobbying for national standardisation of environmental impact assessments;
 - 3.4 lobbying for the inclusion of environmental issues in nursing, midwifery and medical education;
 - 3.5 collaboration between nurses, midwives and medical industry manufacturers to design bio-degradable disposable products; and
 - 3.6 nurses and midwives advocating for healthy environments.
4. All health facilities acknowledge and accept responsibility for the environmental impact of health care service delivery.
5. All health facilities should establish a mechanism which, in collaboration with all stakeholders and other appropriate personnel, advises on policies and protocols in relation to environmental issues; undertakes environmental impact assessments; provides advice on new and existing products and buildings; and seeks to operate in the most resource efficient manner.
6. All health facilities should carry out environmental audits to assess energy, water and resource consumption, pollution of soil, air and waterways, and waste generation and disposal.
7. All health facilities should set goals and targets in relation to the reduction of general and clinical waste; reducing energy; water and resource consumption and levels of pollution generated by the facility.

8. All health facilities should develop policies and protocols to minimise the over-use of all disposable products and seek alternatives where appropriate.
9. Environmental hazards should be identified and eliminated at their source and controlled in relation to maintenance and decommissioning activities.
10. Nurses and midwives are encouraged to be socially aware and politically active in relation to environmental Issues.
11. Nurses and midwives have the right to participate in the formulation and implementation of action plans to establish environmentally sustainable production techniques and practices in the workplace.
12. Nurses and midwives, without fear of victimisation, have the right to bring to the attention of colleagues, employers and the public, the dangers of environmentally harmful processes and products.
